

Webeye Monitor (AVLG) – Prohibition of private route visibility

The purpose of document

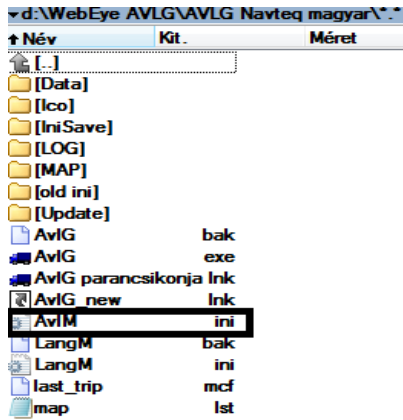

The purpose of this document is to describe clearly how to prohibit the visibility of the private routes in the locally installed WebEye AVLG program.

Prohibition of private route visibility

1. Close the AVLG program!
2. Find the files of the AVLG on your PC:
Right click on the icon of the AVLG, see the Properties menu.
In the pop-up window you can see the location of the program in the “Location” field.

3. Open the AvlM.ini file!

- Find the Alert matrix (“Riasztási mátrix”) section in the opened file and copy the following parameter to the end of this section.

alr_official=00000004

```
#-----
#           Riasztási mátrix
#-----
# AlrXXX    - Speciális digi szenzorok
# AlrSnsNN  - AZ NN számú általános szenzorok
#-----
```

```
#----- Tele memória
#####alrSns8=0
#----- Ütközés
#####alrSns9=0
#----- Ajtó *
#####alrSnsA=0
#----- s11
#####alrSnsB=0
#----- s12
#####alrSnsC=0
#----- Indulás
#####alrSnsE=0
#----- Analóg limit
#####alrSnsI2=0
#----- Magán
#####alrSnsPriv=0
#----- Hivatali
#####alrSnsOffi=0
alr_official=00000004
```

- Save and close the file.
- Start the AVLG and the private routes will not be visible from now on.
